

Performance comparison of
TAKUMI motor oil

SPECIFICATION OF "TAKUMI" MOTOR OIL

SUPER GT GT300 Class
ISHIMATSU Kosei RUNNUP PORSCHE

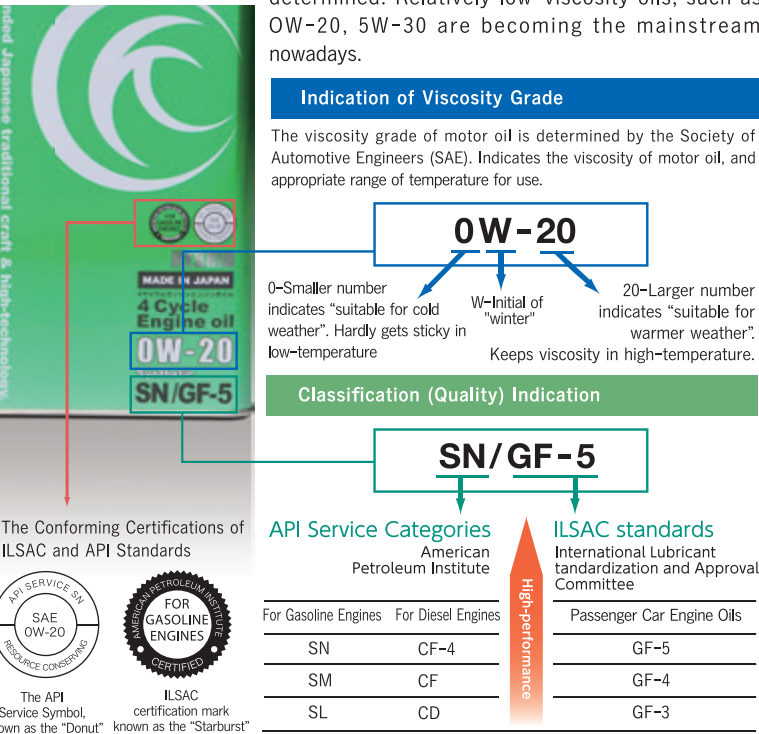

What's HVI base oil?

High-quality base oil used for TAKUMI series is composed through a highly hydrocracking refining technique. TAKUMI series contains very few impurities in oil comparing to the conventional; Generation and mixing of sulfur, nitrogen, unsaturated hydrocarbon (aromatic) were remarkably reduced. As the result, the fundamental quality, such as oxidation stability, required engine oil was particularly improved. The high reliability and quality control of our production plant are certificated by ISO9001, ISO4001 and JIS (Japanese Industrial Standards Committee).

Navigating motor oil standard

The grade (quality) and viscosity of motor oil are indicated on the surface of package, which help you to select appropriate oil depending on the type of car or purpose of use. The global standard for quality and viscosity for motor oils are determined. Relatively low-viscosity oils, such as 0W-20, 5W-30 are becoming the mainstream nowadays.
